

Home Performance Assessment Retrofit Services Homeowner Guide

Please review and complete these items before the start of your Retrofit Project. Call with questions.

- Remove all items from designated work areas allowing access for crew members, ladders, tools, and equipment.
 - Remove items that block access to your crawlspace, attic, basement, and garage storage.
 - We kindly ask that you restrain pets during the project. This avoids potential injury to your pet and interaction with our crews, construction materials, and equipment.
- Please allow for patience during the project as we may be limiting access to various areas of your home. The work area or other designated areas may be affected for the entire project.
- When two-part spray foam is applied, we ask homeowners take extra caution and avoid the work area as instructed by our crew members. Exposure to vapors during the 1 hour curing process is hazardous without proper safety equipment and personal protection.
 - Submit deposit or payment to 4 Peaks.
